

SIVA MANIKANTA GALABA

Software Engineer — Full Stack (MERN) & AI Integration

Andhra Pradesh, India | +91-8374082783 | galabasivamanikanta8@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

PROFESSIONAL SUMMARY

Final-year Computer Science (AI & ML) undergraduate who builds and ships scalable full-stack web applications end to end. Experienced across React.js, Node.js, Express.js, and MongoDB, with working knowledge of REST API security (JWT), role-based access control, and AI/ML API integration. Comfortable collaborating with product, design, and engineering peers in a fast-paced, high-ownership environment, and quick to pick up new tools and frameworks.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), TypeScript, Python, SQL, NoSQL, HTML5, CSS3
- Frameworks/Libraries: React.js, Next.js, Node.js, Express.js, Tailwind CSS, Bootstrap
- Databases: MongoDB, MySQL
- Tools & Platforms: Git, GitHub, Vercel, Render, Postman
- Practices: REST API design, JWT auth, role-based access control, Git-based collaboration, debugging & code review

KEY PROJECTS

DiagnoLabs — Healthcare Diagnostics Platform — *React · Node.js · Express · MongoDB · JWT Auth · REST APIs · AI Health API*
[diagnolabs.netlify.app](#)

GitHub: [github.com/Galabasivamanikanta/DiagnoLabs](#)

- Built a scalable MERN-stack platform where patients search diagnostic labs, book appointments, and upload medical reports for AI-generated health insights, supporting 3 user roles (Patient, Lab Admin, Super Admin).
- Implemented JWT authentication with refresh-token rotation and role-based route middleware so each role can only access its own permitted API endpoints — directly applying REST API security and RBAC.
- Built the file upload pipeline with Multer and cloud storage for PDF/image medical reports, adding type and size validation to reject invalid uploads before they reach storage.
- Indexed MongoDB fields used in lab search (location, specialization) to keep discovery queries fast as the lab directory grows — a direct example of designing for scale.
- Integrated an external ML API to turn uploaded reports into plain-language health insights shown back to the patient, and collaborated across the stack from data model to UI to ship the feature end to end.

Delish Dash — Food Delivery App — *HTML · CSS · JavaScript · Real-time Order Tracking* [delishdash.ccbp.tech](#)

- Built a complete food ordering flow — menu browsing, cart, checkout, and order history — with authentication and a responsive layout tested across mobile and desktop breakpoints.
- Added real-time order status tracking so users can follow an order from placed to delivered without refreshing the page.

CineWave — Movie Booking Platform (BookMyShow-style) — *React · TypeScript · Tailwind CSS · Dynamic Booking Flows*
[show-spotlight-spark.lovable.app](#)

- Built a movie discovery and seat-booking flow with a typed data model (Movie, Booking, Seat interfaces) to catch booking-state bugs at compile time instead of runtime.
- Used React hooks and Tailwind CSS for a fast, mobile-friendly UI with optimized re-renders on the seat-selection screen.

EDUCATION

B.Tech, Computer Science (AI & ML) — Parul University (PIET), Vadodara, Gujarat

Expected 2027

Diploma, Electrical & Electronics Engineering — A.M. Reddy Memorial College of Engineering

2021 – 2024 | GPA: 78.22%

CERTIFICATIONS & TRAINING

- CCBP 4.0 Full-Stack Developer — NxtWave Academy
- AI Workflows & Automation — Make.com / NxtWave
- Model Context Protocol (MCP) — Workshop
- Robotic Process Automation (RPA) — Automation Anywhere
